

Unparalleled risk assessment at a lower cost

Track your financial performance and manage utilization with analytics designed specifically for your ACO.

Every health care organization and patient population is different. ACO participants bring competing priorities and diverse organizational cultures and approaches to care delivery. Populations bring unique combinations of cultural, socio-economic, and clinical challenges. No one knows how to manage your ACO better than you and your management team. However, to maximize shared savings and bonuses, you need the right tools, analytics, and workflows to monitor your patients, identify specific issues, and prioritize and organize the actions you want your care managers to accomplish.

Acclivity provides the most cost-effective risk assessment and population health management tools available to the ACO market. We give you the tools you need to focus your limited resources on the high-risk pool of patients that is in constant churn and drives roughly 50% of your population's total costs. While other vendors make you conform your operations to their technology solutions, Acclivity listens to your needs, and configures your analytics, workflows, and reporting to fit the way you work.

DEVELOP A STRONG AND EFFICIENT NETWORK OF HIGH-QUALITY, LOW-COST PROVIDERS

Monitor & Manage Your Patient Population

- Identify patients in or about to enter a high utilization period.
- Provide PCPs with a practical means of coordinating care.
- Ensure care team concurrence is achieved for all major procedures.
- Monitor high-risk patients for utilization behaviors and medication adherence.
- Identify socio-economic factors that adversely impact patient care.

Monitor & Manage Your Provider Network

- Objectively monitor both facilities and specialties to see who's spending, why, with whom, and how much.
- Identify facilities and specialties who present adverse behaviors, and those who deliver beneficial behaviors.
- Maintain relationships with providers who deliver quality care and avoid those who don't.

Focus On Things You Can Actually Control

- Provide clinicians with clear, concise patient data — at the point of care — that directly impacts the quality of care they're about to deliver.
- Give practical insights to providers on issues that they have the expertise, authority, and opportunity to resolve.
- Never waste time on analytics that focus on issues you can't control.
