

Acclivity Health supports the mission of Community Hospice & Palliative Care – helping patients and their loved ones work through the challenges of advanced illness care. Powered by the industry’s most trusted and innovative technology platform, Acclivity Health provides the data insights needed to ensure patients receive the right care, at the right time, in the right setting.

BUILDING CONNECTED CARE COMMUNITIES

The Acclivity Platform provides a connected care capability to bring together clinical management and patient engagement across the health care continuum. Connecting the care community empowers patients to live their lives to the fullest, surrounded by family and friends, as well as a multidisciplinary care team so that they might meet death with a sense of comfort and dignity.

- Patients and families receive transparency regarding the patient’s condition and treatment options
- Primary care providers refer their costliest patients and better manage performance indicators related to bonus structures
- Hospice providers have a voice and ensure patients eligible for hospice or palliative care are identified earlier in the journey
- Connected care teams provide quality, patient-centered care that honors their dignity and meets the patients’ care goals

The Acclivity Platform delivers a proven ROI for providers, maximizes hospice benefits, reduces healthcare costs, and improves quality and care for patients – all in support of value-based care initiatives.

85% reduction in hospital admissions¹

¹ACO Improvements in Florida

63% reduction in emergency utilization²

²ACO Improvements in Florida

90-day hospice length of stay³

³Hospice in Florida

\$45K annual avg. savings per patient enrolled in advanced illness care programs⁴

⁴2nd ACO in Florida

EMBRACING INNOVATIVE, MARKET-LEADING TECHNOLOGIES

Through the use of data analytics, workflows, machine learning, and education tools, the Acclivity Platform transforms what has historically been a fragmented and uncoordinated care approach into a connected, collaborative, and community-based care model.

DATA ANALYTICS

Leveraging, in part, tools developed by public health experts at Johns Hopkins University, the Acclivity Platform utilizes predictive modeling and customized workflows to enable patient-centered decision making.

WORKFLOW MANAGEMENT

Enabling efficient collaboration, clinical data from across the patient’s journey is populated directly into care team workflows, assisting with referrals, care coordination, and communication.

MACHINE LEARNING/AI

Leveraging the power of emerging technologies, our platform analyzes and segments patient population to identify and predict – with 95% accuracy – prognoses for advanced illness patients who could benefit from a more appropriate care plan.

EDUCATION & ENGAGEMENT

Created by Duke University palliative care team members, educational videos help guide patients and families through the process associated with advanced illness – from diagnosis to defining goals of care and options for end-of-life care.

Acclivity Health is a trusted technology innovator who is transforming the way care is provided to patients with advanced illness. For more information visit: AcclivityHealth.com
