

Acclivity Health Platform for Home Health, Palliative, and Hospice Care

Acclivity provides a technology platform with the insights you and your referral partners need to inform appropriate care and care transitions. With the most comprehensive data on your entire patient population, the Acclivity platform facilitates more referrals, increases your patients' length of stay, and improves your daily census.

Starting with industry-leading analytics, connection to HIEs, and automated workflows, our platform includes easy-to-use features that help transform the care of seriously ill patients.

Feature	Function	Benefit
Data at the Point of Care (DPC)	Provides 3 or more years of Medicare FFS Part A, B, and D claims data for all patients – and all data is integrated with your EHR.	Get a patient's complete medical history to quickly identify referral candidates, eliminate paperwork and spend more time delivering care.
Palliative Performance Scores (PPS)	Reviews daily changes to all patients' functional status to ensure appropriate and timely movement between service lines.	Prepare for action plans and pathways, including Service Intensity Add-ons (SIAs), and schedule workforce effectively.
Comprehensive Care Candidate Dashboard	Predicts PPS, frailty, prognosis, hospitalization, 30-day readmission, 2-year high utilization likelihood, and death in 1, 3, 6, 12 month time series, with up to 95% accuracy for every patient on service.	Help referral partners determine patient eligibility for incremental care delivery and transition to palliative or hospice care.
Event Notification Service (ENS)	Offers real-time alerts when hospice patients enter the ED and are discharged from care facilities.	Enable effective intervention by the palliative or hospice team on patient's behalf, ensure end-of-life wishes, manage appropriate care after discharge, and prevent unnecessary hospitalizations.
Propensity Scoring	Provides benchmarks for your individual patients against our total data set.	Gain visibility into future outcomes and validate best next intervention for each patient in your care.
Quality and Financial Reporting Tools	Tracks the specific value-based metrics your contract uses to gauge quality and outcomes.	Remain compliant with all quality measures that impact reimbursement, revenue, and outcomes.
Spend Outside the Hospice Benefit Report	Gives insights from five quarters of claims history (including 3 or more years of Part A, B, and D claims) for every location or patient, from the time of hospice admission to discharge.	Control spend outside the hospice benefit, determine if submitted claims are outside of your normal. Easily document unrelated spend for CMS audits and avoid financial penalties.

What Acclivity Does

An Overview Of What Makes Our Process Unique... And Better.

-  Acclivity aggregates the most real-time, up to date, patient identifiable data from more sources than any other traditional analytics platform.
-  Acclivity then uses that full data set to make a myriad of patient predictions, provide actionable insight, and build or tie into workflows beyond what others in the market do today.
-  The use of this comprehensive set of data ensures that patients receive the right care, in the right setting, at the right time.
-  Doing so increases conversion rates, length of stay, and revenue, while protecting against audits and increasing performance in revenue based KPIs.
-  In addition to our state-of-the-art Care Transition Module, we include a full set of white glove services tied to healthcare economists, market development, strategy, along with clinical and business best practices.
