

## Data At The Point Of Care

Data at the Point of Care (DPC) enables healthcare providers to deliver high quality care directly to Medicare beneficiaries.

### How Does Data At The Point Of Care Reduce Your Burden And Help You Improve Care?

#### Clear Claims History

Avoid reliance on paper, faxes, or the patient's memory for their past diagnoses, procedures, and medications.

#### Improved Care Insight

Learn about new diagnoses and medications, completed procedures, preventive items, and visits to clinics, urgent care, the hospital, or the ER.

#### Complete Medication History

View medications that were filled – or went unfilled – at the pharmacy to identify possible gaps in the patient's medication history.

#### Benefits of the Data at the Point of Care program for Hospice-only customers:

- Never miss out on potential Service Intensity Add-on (SIA) revenue opportunities for patients served in the last 10 days of life.
- Get peace of mind with additional documentation for support agencies during any OIG (Office of the Inspector General) probe.
- Receive functional status trending using our proprietary PPS estimator for every patient on our platform.
- Increase patient family engagement and help them avoid burnout with our convenient mobile app – available on both Apple and Android devices.

#### Additional benefits for Hospice customers with PCP, Palliative, or Home Health (qualifying event inside of the upstream service):

- Qualify 100% of your patients from Primary Care, home health and bridge programs directly into your hospice with industry leading conversions.
- Measure PPS, Frailty, Social Determinants and Patient Prognosis from our tooling sitting directly on the CMS data for each of your patients on any service line.
- Convert referrals seamlessly from any upstream service line to your hospice.
