

The Ultimate Medical Face Sheet for Improving Patient Care

Having comprehensive patient data at the point of care is critical for making clinical decisions, coordinating care, and informing and educating your patients. However, having access to only the diagnoses and services you yourself have generated in the patient record creates a critical handicap to the delivery of effective health care.

THE ACCLIVITY AT-A-GLANCE FACE SHEET

Acclivity overcomes this handicap with our At-a-Glance face sheet. The At-a-Glance sheet starts with the data from your EHR and adds far more comprehensive data on the diagnoses, services, behaviors, and risks identified by all other providers.

In under 60 seconds, you can review recent admits and ER utilization, specialist visits, hospitalization and health risks, medication compliance issues, and preventative care needs in an intuitive bullet point format.

With a 360° view of each patient's complete medical journey on one sheet, you have all the data you need to understand what is going on now and what needs to be done to:

- Optimize care management across your practice
- Improve patient outcomes
- Reduce high-cost utilization
- Meet quality and cost metrics in your value-based care contracts

PALLIATIVE PERFORMANCE SCALE FOR CARE TRANSITION DECISIONS

While your primary goal is to keep healthy patients healthy and treat patients with chronic illness, your seriously ill patients look to you for counsel on when to transition to palliative or hospice care. Our At-a-Glance sheet provides data-driven evidence to help you make that determination, with risk assessments, readmission rate indicators, and mortality predictions. While physician estimates of prognosis are around 10%-20% accurate, Acclivity's risk scores are **up to 90% accurate**.

Using this data, you can identify those patients who would benefit from end-of-life care and get them access to those services earlier.

Patient Name: Lastname, Firstname
